

## INVESTOR CORNER

Thank you for your investment in NextEra Energy, Inc. Your company remains focused on building long-term value for shareholders by investing in energy technologies that are designed to provide affordable, clean and reliable power to our customers for years to come. We have set ambitious goals for 2014, and we're pleased to provide you with an update on several recent accomplishments.

### Stock Certificate Holders

Certificate holders should consider depositing their stock certificates into their accounts at our transfer agent, Computershare, to avoid the cost of replacement due to loss, theft or destruction. Certificates, along with a letter of instruction to deposit the certificate into DRS book entry, should be sent insured mail to NextEra Energy, Inc., c/o Computershare, 250 Royall St., Canton, MA 02021. Computershare will send you a confirmation of the deposit. You may also deposit your certificates into your brokerage account. See your broker for instructions.

### Direct Deposits

We encourage shareholders who receive their dividends by check to enroll in direct deposit.

Once enrolled, your dividend payment will be deposited into your bank account on each dividend payment date. Visit [Computershare.com/NEE](http://Computershare.com/NEE) to enroll online, or call 888-218-4392 for an authorization form.

This newsletter contains forward-looking statements that are subject to various risks and uncertainties. Discussion of factors that could cause actual results to differ materially from management's projections, forecasts and estimates are detailed in the company's most recent Securities and Exchange Commission filings on Forms 10-Q and 10-K.

## FPL's Typical Customer Electric Bill Remains Florida's Lowest for 5th Straight Year

Florida Power & Light Company (FPL) announced on April 1, 2014, that for the fifth year in row, its typical residential customer bill will continue to be the lowest in the state of Florida and is currently about 25 percent lower than the national average.

"Low bills help FPL deliver outstanding value to our customers and encourage greater investment in our state economy," said Eric Silagy, president of FPL. "We know that every dollar counts, and that's why we're investing in clean, highly efficient power plants that use less fuel. We pass 100 percent of those savings on to our customers, money that stays in our customers' pockets and eventually ends up creating more economic opportunity in Florida."

FPL's low rates add up to substantial savings. A typical residential FPL customer using 1,000 kilowatt-hours (kWh) of electricity a month saved more than \$320 last year alone compared to the average price paid by Floridians served by other electric utilities. In total, over the past five years through Dec. 31, 2013, a typical FPL customer saved an estimated \$1,800 versus the Florida average and \$1,500 compared to the average American electric customer.

Moreover, while the prices of healthcare and other essentials have risen in recent years, FPL's typical customer bill is actually lower than it was five years ago – today, it's down about 7 percent compared with 2009.

FPL's business customer rates are highly competitive as well – among the lowest in the state and below the national average. To encourage economic development, FPL offers special discounted electric rates to help new and expanding businesses create jobs for Floridians. To date, 29 companies have participated in this program, creating an estimated 4,700 new jobs in Florida.

A major contributor to low customer rates is FPL's strategy of investing in highly efficient power plants that run on clean, American-produced natural gas. FPL has systematically reduced by 99 percent since 2001 its use of foreign oil to generate electricity – from more than 40 million barrels a year in 2001 to about 200,000 last year. These investments have saved customers more than \$6.5 billion in fuel costs over the period with more savings expected.

All of the power generated by the Genesis Solar Energy Center is being provided to Pacific Gas & Electric Company under a long-term contract.

## NextEra Energy Resources' Genesis Solar Energy Center Begins Operations

On April 24, 2014, an affiliate of NextEra Energy Resources, LLC, officially dedicated its Genesis Solar Energy Center. This \$1.2 billion investment represents another example of the company's superior execution of its development goals, and helps continue the shift of its portfolio toward long-term contracted assets.

Located in Riverside County, Calif., the new solar facility is capable of generating 250 megawatts (MW) of solar power, enough electricity to meet the energy needs of 88,000 homes. All of the power generated by the Genesis Solar Energy Center is being provided to Pacific Gas & Electric Company under a long-term contract.

"We are proud to be a part of an initiative that contributes to California's renewable energy supply and helps to power Riverside County's local economy," said Armando Pimentel, president and chief executive officer of NextEra Energy Resources.

"Reaching this important project milestone would not have been possible without the cooperation and hard work of all our project partners."

The Genesis Solar Energy Center is located on approximately 1,950 acres overseen by the U.S. Bureau of Land Management. The solar facility, which is comprised of two identical 125-MW generating units, entered service in November 2013 and March 2014, respectively. The project is delivering significant environmental benefits, including the avoidance of approximately 330,000 metric tons of carbon dioxide per year, equal to removing more than 68,000 vehicles off the road.

## FPL Commissions Riviera Beach Next Generation Clean Energy Center

FPL in April 2014 formally commissioned its Riviera Beach Next Generation Clean Energy Center. This investment of about \$1.3 billion is now one of the cleanest, most energy-efficient plants in the nation. Over its operational lifetime, the new energy center is expected to provide FPL customers with hundreds of millions of dollars in fuel and other savings.

The new energy center is capable of producing more than 1,200 MW of electricity, which is enough to power approximately 250,000 homes and businesses. This is roughly double the amount generated by the previous plant without using any additional water or land. Construction was completed two months ahead of schedule.

In addition to saving on fuel costs, the energy center's technology further improves FPL's emissions profile – already among the cleanest in the United States. The new facility generates power with half the rate of carbon dioxide emissions and more than 90 percent fewer air emissions, compared to the former Riviera Beach plant.

## NextEra Energy Recognized for Ethics, Investor Relations Programs

NextEra Energy has been named a 2014 World's Most Ethical Company by the Ethisphere Institute, an independent center of research promoting best practices in corporate ethics and governance. It is the seventh time NextEra Energy has received this honor.

"Good corporate governance is a competitive advantage for NextEra Energy and a reflection of our strong corporate values," said Jim Robo, chairman and chief executive officer of NextEra Energy. "We are pleased that our actions in these areas have been honored once again. We fully recognize that operating ethically, reliably, safely, and profitably go hand in hand."

This year, just 144 companies worldwide were selected across 41 industries, including only four other U.S. energy and utility companies. Among NextEra Energy initiatives evaluated by Ethisphere were the company's corporate governance structure as well as its compliance and ethics program oversight, written policies, training and communications, monitoring and auditing, and enforcement and response. Evaluators also inquired about NextEra Energy's workplace injury rates, employee benefits, environmental programs, and charitable activities.

The company has also been recognized by *IR Magazine* for having the best Sustainability Practice across all sectors and best Investor Relations program in the utility sector. *IR Magazine's* awards are recognized as one of the leading international awards programs honoring excellence and leadership in investor relations.

The winners of *IR Magazine's* 2014 awards were identified by an independent survey of more than 700 portfolio managers, buy-side and sell-side analysts, and retail investors throughout the United States. Each was asked to vote for the company they think provides the best IR service in each awards category.

The award is the latest in company recognition. In February 2014, NextEra Energy was named No. 1 overall among electric and gas utilities on *Fortune* magazine's 2014 list of the 'World's Most Admired Companies.' The company was named tops in its industry for an unprecedented eighth straight year.
