

NextEra 360™ is a comprehensive smart energy optimization platform that helps businesses perfect their short and long-term energy plans by tracking carbon accountability goals, reducing energy costs, procuring cleaner power, and maximizing value from renewable energy assets.

NextEra Energy has developed NextEra 360 to Design, Market and Operate the largest portfolio of renewable assets in the world. Originally designed for internal use, NextEra Energy has optimized its \$50B fleet for more than 15 years. And now the world-leading producer of green energy has made it available to everyone. Are you ready to see real results with your clean energy trajectory? Ready to benefit from real savings? If so, NE360 is ready to help you get there.

Visit [NextEraEnergyResources.com/nextera360](https://www.nexteraenergyresources.com/nextera360) for more information. Schedule a 360 second meeting with us learn how you can Enable Real Zero, Reveal Real Savings and Deliver Real Results <https://www.nexteraenergyresources.com/nextera360/contact.html>.

ENABLE REAL ZERO

- » Achieve your goals and track progress towards them with comprehensive carbon-emissions-reduction analytics.

REVEAL REAL SAVINGS

- » Increase operational efficiency and reduce cost.
- » Maximize value from renewable energy equipment.

DELIVER REAL RESULTS

- » As the world's leader of wind, solar and battery portfolio under management, we've achieved 47% better CO2 emissions than industry average.
- » We've gotten real results using NextEra 360 and now we want to help you do the same.

PERFECTING POWER AT EVERY ANGLE

FULL-CIRCLE APPROACH TO GUIDE YOUR ENERGY AND SUSTAINABILITY JOURNEY

- ✓ Balance cost, carbon and maintenance.
- ✓ Design your optimal energy management strategy.
- ✓ Perfect your high energy use/generational equipment performance with optimal efficiency.
- ✓ Developed to help you increase operational efficiency and reduce cost no matter where you are on your energy management journey.

PORTFOLIO PLANNER

Integrated Resource Design

Design, plan and execute cost-effective energy systems Analyze and develop roadmaps for green energy and decarbonization initiatives

AUTOMATIC DISPATCH & TRADER

Energy Management

Optimize resource performance – battery charge/discharge; capture value in Demand Response programs Generate market bids based on load, capacity and market conditions; capture value in real time markets energy initiatives

ASSET MONITOR

Asset Performance

Track, predict and optimize asset performance – go beyond preventive maintenance

METER ANALYTICS USER INTERFACE

Grid Analytics

Detect outages, improve reliability, reduce O&M costs Aggregate and track water and electric meter data for actionable insights

SUPPORTED BY CONNECT HARDWARE TECHNOLOGY
